Project Haystack at ISH 2019

Founding Haystack members from J2 Innovations and Sky Foundry are headed to Frankfurt, Germany. They will be representing [Project Haystack](#) alongside BACnet at their community booth at the ISH Show. Project Haystack is the open source initiative to streamline working with data from the Internet of Things.

Project Haystack standardizes semantic data models and web services with the goal of making it easier to unlock value from the vast quantity of data being generated by devices and systems that permeate our homes, buildings, factories, and cities. Applications include automation, control, energy, HVAC, lighting, and other environmental systems.

Like BACnet, Project Haystack fosters openness and interoperability in building automation related domains, and is working closely with the BACnet. The Haystack community is a very active community, comprised of a wide range of global and regional champions - from the building automation and IoT world.

J2 Innovations leverages Project Haystack tagging and data modeling extensively throughout their FIN applications suite - from building automatically generated user experiences to dynamically linked control logic. FIN framework software comes with Haystack built right in, making it easier for partners and OEMs to create future products.

SkyFoundry's software solutions are designed to help clients derive value from their investments in smart systems. Their SkySpark informatics platform provides the services and features to collect, store, analyze based on Project Haystack tags to identify issues, patterns, deviations, faults and opportunities for operational improvements and cost reduction.

Come by our stand and find out more about Project Haystack! You can [find us at Hall 10.3 A61 BACnet Interest Group](#), in a prime location at the entrance to Hall 10.3.
