

# PLC - BACnet/IP Programmable Fieldbus Controller

32-bit CPU, multitasking

The 750-830 BACnet PLC connects the WAGO-I/O-SYSTEM to the BACnet protocol.

The 750-830 controller corresponds to BACnet B-BC device profile according to DIN EN ISO 16484-5.

The controller provides the three following functionalities:

1. Native server: For each channel, appropriate BACnet objects are generated automatically for the digital and analog I/O modules that are connected to the controller.
2. Application server: Other supported BACnet objects can be created via IEC 61131-3 programming environment.

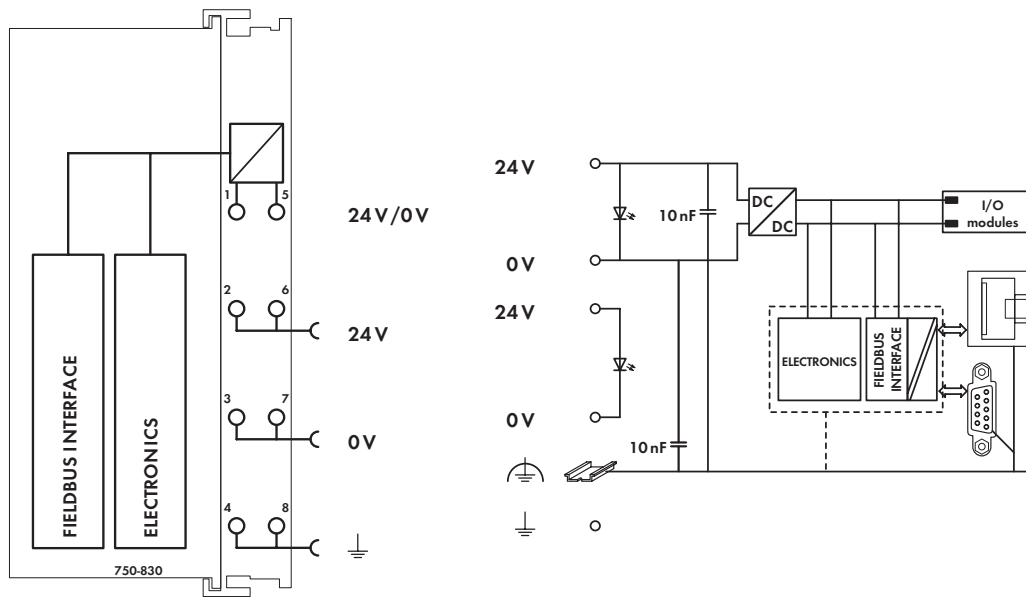

3. Application client: Using the client functionality, objects and their properties can be accessed by other BACnet devices. Access to BACnet/IP networks is provided by the controller's RJ-45 interface.

The integrated RS-232 interface communicates with external devices. The controller can also be addressed as Modbus RTU slave via RS-232 interface. Programming PLC applications is performed in compliance with IEC 61131-3. The controller has a battery-backed RTC and 32-bit multitasking CPU. For Web-based applications, HTML pages can be generated on an internal server.

Start-up and configuration of the BACnet networks is performed using the Windows-compliant WAGO BACnet Configurator.
